CLASSMATE ACTIVITIES

[Gail Sweeney](#)

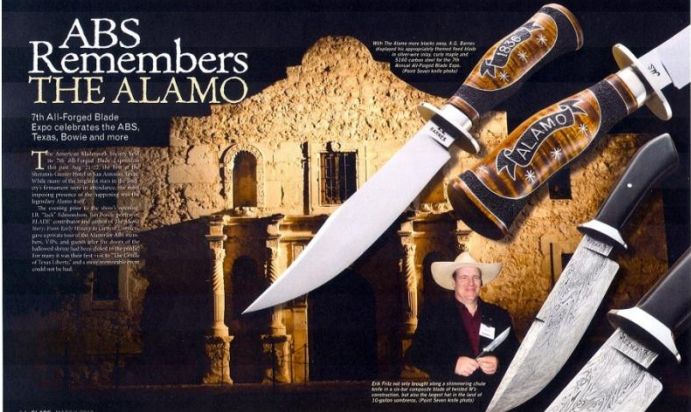

For Memorial Day my son, his friend & I visited the Fredericksburg National Cemetery and viewed the Luminaries display on May 28th. Just we were getting ready to leave at the end of the program; we encountered several of the volunteers dressed in period costumes. My son was taking pictures and asked if they would pose for him. They graciously agreed and he posed them in several shots. I have attached our favorite.

In 1995, local Boy & Girl Scouts approached the National Park Service with the idea of starting an Annual Luminaries program to honor American soldiers – to light one luminary for each of the 15,300 American soldiers who were laid to rest in the National Cemetery. Because many plots contain more than one body, roughly two Luminaries are used for each stone. The graves of Union soldiers dominate Fredericksburg National Cemetery, with a lesser number of plots set aside for soldiers who fought in the Spanish American War, World War and World War II.

On Memorial Day weekend, hundreds of Scouts participate in the program. They assemble the luminary bags, and place them beside the graves. As darkness settles over the Cemetery, Scouts light the candles, illuminating the hillside. Visitors walk among the graves, pausing now and again to listen as volunteers explain different aspects of the cemetery's history. Every thirty minutes "Taps" sounds on the wind, its mournful tones reminding Americans of the sacrifices that others have made for their freedom.

COMEDY CORNER

WHY TEACHERS DRINK ...

2. A 3-kg object is released from rest at a height of 5m on a curved frictionless ramp. At the foot of the ramp is a spring of force constant $k = 100 \text{ N/m}$. The object slides down the ramp and into the spring, compressing it a distance x before coming to rest.

- 10 (a) Find x .
 5 (b) Does the object continue to move after it comes to rest? If yes, how high will it go up the slope before it comes to rest?

$$U = 3(9.81)(5) = 147.15$$

$$U_s = \frac{1}{2}(100)x^2 = 50x^2 \dots ?$$

No, there is an elephant in the way.

(c) Tracey says

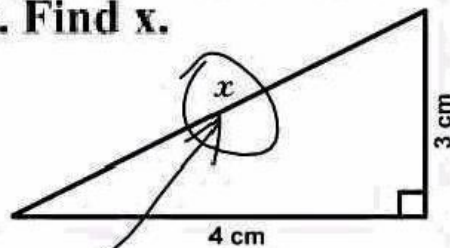

$(\sqrt{2} + \sqrt{8})$ is an irrational number
 $(\sqrt{2} + \sqrt{8})^2 = 18$
 I think that if you square an irrational number you always get a rational number

Tracey is wrong.
 Use an example to show that Tracey is wrong.

She's a woman
